

CONTEMPORARY ASSAULT RIFLES

Assault rifles appeared during World War II. The concept was to give the ground soldier a weapon which could fire rapidly while in close combat, and have good precision for long range firing. Heavy rifles, like the first Kalashnikov rifles, or weapons like the G-3, have been progressively replaced by light caliber assault rifles, like the M-16, which are more accurate and less lethal : an incapacitated soldier causes more trouble to an army than a dead one.

"Bullpup" configuration, with the magazine behind the grip like the Enfield IW rifle or the FAMAS, has been preferred since the seventies for weapons that have needed to be compact, for use by parachutists or for urban and jungle combat.

9A-91	
Type : Assault rifle	Cartridge : 9 mm SP-5 (4D6)
Accuracy : -1	Reliability : very reliable

The SIG 552 is the standard assault weapon of NATO special forces. It uses standard 5.56 mm rounds, and features a shorter length than most full size assault rifles. The SIG 552 also features a selector switch that allows you to choose between single shot, three round bursts and full-auto. This is a common weapon the world over and can be found in most major countries.

The RS 300 is a conversion of the Colt M4 and is characterized by a new system of borrowing for gas, more efficient than the original system and allows to free themselves of this mechanism inside of conventional telescopic or fixed butts. This modification therefore allows the use of butts folding. The weapon has the advantage of being extremely flexible, practical both in CQB (Close Combat Battle) over distances of engagement important. It is also rewarded with a reliability and easy to control by using automatic continuous firing.
